Mold & Machine Works Inc.

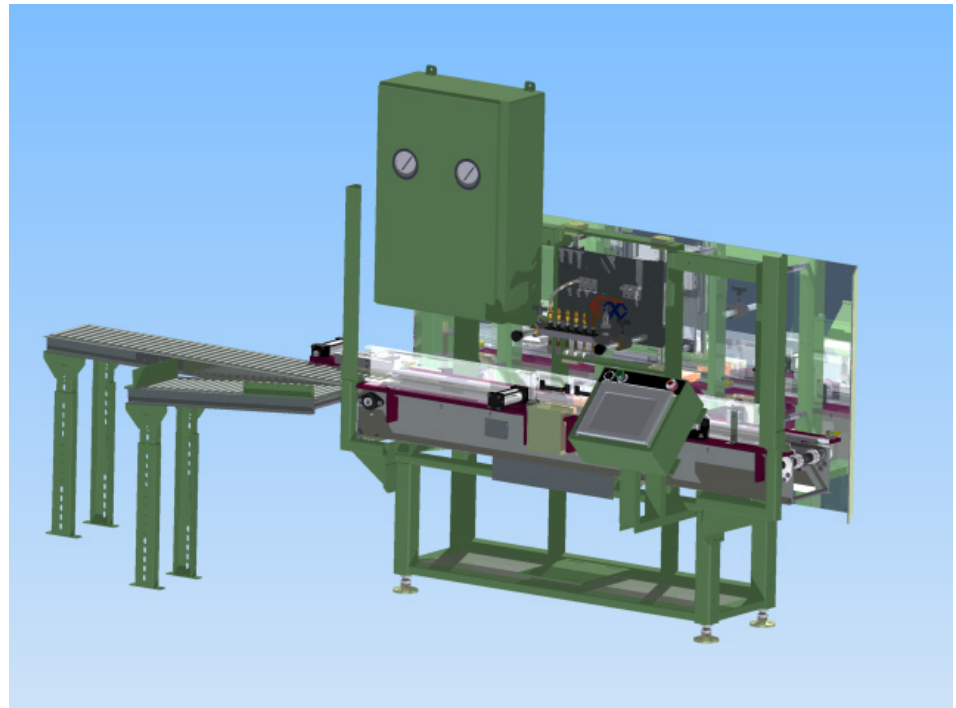

Automatic Leak Check Machine

The automatic leak check machine provides an accurate means of case to cover seal testing.

The advantages of the Farmer Punch include the rapid rate at which the containers are processed and the ability to test cases in the production line, after the heat seal machine. Unattended operation time is greatly enhanced and worker productivity increased.

The Farmer leak check machine uses differential pressure gauges, bubble tilt air valves, precision regulators to ensure correct fill pressure and PLC controls.

No tools are required for quick changeover.

Height adjustments are obtained rapidly using fixed stops.
(U.S. Patents 5,662,021)

Battery Manufacturing Equipment & Tooling Since 1938

Fax 727-527-9894

Features

- Speeds of 8+ batteries per minute
- Accuracy & reliability for case to cover seal testing
- BCI group sizes U1 through group 31
- Rapid changeover
- Exact positioning of case to fill holes

Benefits

- Lower operating costs
- Low maintenance costs
- Ultra flexible for modern assembly lines
- Wide range of battery types supported
- Minimal down time (loss of production)
- Automated for better productivity
