Mold & Machine Works Inc.

Automatic Top Terminal Brusher

The Automatic Top Terminal Brusher provides an accurate means of final terminal brushing either as an in-line application or off-line final inspection as part of the finishing process. Capable of 4+ batteries a minute the Automatic Terminal Brusher is compatible with most assembly lines. The Farmer machine is capable of handling BCI battery groups from the U1 through the 4D/8D.

An optional side terminal brushing station is available.

Height Adjustments are obtained rapidly using fixed stops.
(U.S. Patents 5,662,021)

Battery Manufacturing Equipment & Tooling Since 1938

Features

- Speeds of 4+ Batteries per minute
- Brushless Motors for Long life
- BCI Group Sizes U1 through 4D/8D
- Rapid Changeover
- Small Foot Print

Benefits

- Lower Operating Costs
- Low Maintenance Costs
- Ultra Flexible in-line assembly lines
- Minimal Down Time
- Modular Material Handling
